▶Our business sector forecasts are a rating system founded upon the microeconomic expertise of Euler Hermes group underwriters and analysts, who closely monitor risk in companies worldwide through our network of more than 50 local subsidiaries. This results in a qualitative assessment of the health and outlook of a sector. Generally, although not in every case, this assessment includes growth forecasts for a given sector. We focus more on the health of businesses (in terms of margins and solvency) than on their growth in turnover.

▶The forecasts cover a total of 72 countries — spread across the six major regions as defined by Euler Hermes — which together account for 95% of world GDP. The number of modalities under the ratings has been cut to 4, compared to 5 previously, to avoid arriving at an average level that is little representative of the realities. The category 'Not available' indicates a sector that is not present in a country or an aggregate that cannot be calculated. The sector forecast for a given zone is the weighted sum (by 2012 GDP) of the forecasts of the countries concerned.

## Editorial

## What steroids are the sectors on?

## International business sector forecasts

**Positive fundamentals & outlook**

- Food & beverages
- Pharmaceuticals
- Automobiles
- Chemicals

**Signs of weaknesses**

- Consumer electronics
- Automotive components
- Rail, maritime & aeronautics equipment
- Machinery
- Paper & pulp
- Manufacture of IT & telecoms equipment
- Steel
- Semiconductors & components
- Distribution
- Information & communication technologies

**Structural weaknesses**

- Construction
- Air transport

**Imminent or recognised crisis**

For this special *Tour de France* outlook, we have not chosen to focus on the cycling industry, but rather to look at which sectors are on steroids and what stimulants they are using – easier to detect than with racing cyclists! Unsurprisingly, the EPO used by most sectors of activity remains consumption, notably in the food and beverages industry (and distribution), chemicals, pharmaceuticals and IT (equipment and services). Nevertheless, this mad dash could be partly slowed by winding mountain passes forming on the horizon. The Alpe d’Huez of these sectors is without a doubt the slowdown in new markets, notably among middle classes in Latin America and Eastern Europe. This promise of new sources of growth has in fact been jeopardized by economic tensions (Brazil, Turkey), but also by the natural slowdown in imports in leading countries such as the United States and the euro zone. If we combine this with more structural changes – the consumer society becoming a user society, deflation linked to the planned obsolescence of certain products, or even the resurgence of protectionism – it becomes more difficult for companies to imagine double-digit growth in export revenues. In recent years, other sectors have also suffered withdrawal symptoms from illicit substances: the tax and banking subsidies that gave them wings! In transport, infrastructure and construction, financial doping is now old news: public and private deleveraging – and the announced end of accommodating monetary policies – constitute a much greater threat than already-high ownership rates in developed countries. So a real difference will appear between sectors that can afford their debt (chemicals, aeronautics) and the rest. Or rather, the companies, or even the types of companies in these sectors... An example? Leveraged buyouts (LBO), those financing operations to acquire another company mostly with the use of bank or bond debt. For those set up just prior to the crisis, the repayment of these acquisitions generates a drain on cash flow that is not at all in line with the expected dynamism of the activity when the financial arrangements were made. For some companies in construction or distribution, this could mean a flat tire. *Ludovic Subran*

Overview

# Reconciling economic (dis)illusions and financial risks

On the whole, global growth is too weak for most sectors. Too mixed and imbalanced, it offers highly disparate gains to the same sectors in different countries.

With real GDP growth of +2.4% expected in 2013 (and +2.5% for trade), the pace of global activity allows only a very small number of sectors to gain from it in a large number of countries simultaneously. Food and beverages, chemicals, and pharmaceuticals are the only three sectors to have been assigned a “positive fundamentals and outlook” in most countries, although the assessment for IT (equipment and services) and distribution is also “positive” in a great number of countries. For most sectors (12 out of the 17 in our sample), the most common situation is one of “signs of weaknesses”. This is particularly the case in more than half of the countries for six sectors, namely, in ascending order of appearances, the steel sector (50% of countries), IT and telecom equipment, consumer electronics, automotive components, paper and pulp, and machinery (74% of countries).

Transport and construction stand out for being the two sectors with the most frequent “structural weaknesses”, although the latter is also the sector that registers a situation of “imminent or recognized crisis” in the largest number of countries, ahead of distribution, textiles and the steel industry.

All in all, construction and transport are the two sectors that count the most situations of “structural weaknesses” and “imminent or recognized crisis”, ahead of the steel, textile, household equipment and distribution sectors. However, this overall picture needs to be adjusted according to the relative weight of each country in the global economy and by the fact that some industries and sectors exist only marginally or not at all in certain countries. After making these adjustments, the international outlook paints a slightly less overcast picture for these sectors, with more weight now given to sectors in a “positive” situation and with “signs of weaknesses” – more than 50% of the countries for the majority of sectors (13 out of 17) – and proportionately less to sectors in “imminent or recognized crisis”. Seen in this light, two sectors now present a particularly more positive outlook: aeronautics and automobiles. Nevertheless, the outlook remains just as poor in most countries for the construction, transport and textile sectors.

The downtrend in global economic growth since 2010 carried over into the first half of 2013, weighing on a growing number of sectors, in particular in Latin America and Eastern Europe. Worldwide, not only did the situation deteriorate in more sectors than it improved during H1 2013, the gap

between the two widened considerably between Q1 and Q2 because of a surge in downward revisions (32 in Q2 after 23 in Q1). This was the case particularly in Latin America, where Brazil, facing a weaker-than-expected recovery, rising inflation and an increase in key interest rates, saw a deterioration in a number of sectors (eight during H1), ahead of Chile (four). This trend was even more pronounced in Eastern Europe (16), hampered by the recession in Western Europe, ongoing austerity and tightening credit conditions. In this region, outlooks were adjusted above all in distribution and in the food and beverages industry, while half were recorded in Slovenia and Cyprus, the latter rocked by capital flight. In Western Europe, the negative trend that persisted in the early part of the year undoubtedly eased in the second quarter, although this did not result in a positive change in prospects for any sector. The situation remains unfavorable in particular in Southern Europe, which has a disproportionate number of sectors with “structural weaknesses” or in “imminent or recognized crisis”. In this context, North America and Asia-Pacific stand out as exceptions. Sector outlooks have stabilized in the United States, despite persistent difficulties in construction, transport, and textiles, and in Canada. Sector outlooks have continued to improve in Asia, particularly in the trio of the Philippines, Malaysia and Indonesia thanks to more upbeat prospects in construction and in IT and telecoms, and including in Japan, where the government’s stimulus measures, or “Abenomics”, are boosting prospects at least in the short term.

Persistent gaps in economic performances between and within regions have rekindled volatility and uncertainty, and have exacerbated sector risks, with the exception – in most cases – of Asia-Pacific.

Divergent growth rates may remain in place for several quarters, given, in the short term, the resilience without

► acceleration in the United States and Japan's temporary *stimulus*, while the eurozone is struggling to lift itself out of recession and emerging countries are still in a slowdown phase, including the Chinese growth engine. The first effect is to continue to fuel market risk. This is the case in developed countries, with weaknesses in job markets, public finances and overall debt levels, which could delay the recovery in their domestic demand and increase competitive pressure, often to the detriment of less competitive domestic supply. This is also the case in emerging countries, where the change in model in favor of more domestic growth drivers is not yet sufficiently advanced, which limits real potential in the short term to the detriment of countries seeking growth drivers in these regions. The second effect, which results from the first, is to rekindle sources of instability, in particular financial. In addition to possible tremors linked to sovereign risk, adjustments in central bank monetary policies, especially by the BoJ in Japan (doubling of the money supply and the inflation target) and the Fed in the United States (forthcoming reduction in the pace of asset purchases) are also sources of disruption for companies, the effects of which are felt via currency markets (cost of imported inputs, export sales prices, competitiveness) and credit markets (access to financing and conditions), while (i) this gives rise to knock-on effects between countries (such as the hike in key interest rates in several emerging countries) and (ii) there are already marked disparities between companies depending on their geographical situation and their size – with a worrying contraction in credit to SMEs in the eurozone. In this more challenging environment, which, in addition, is characterized by an upturn in corporate insolvencies, the four main sectors to have registered an improvement in their situations and prospects in a large number of countries during the first half of 2013 were IT and telecoms services and

equipment, construction and electronics. These four sectors captured two thirds of the improvements – exactly the same figure as for Asia-Pacific, which, for the time being, is proving the most capable of weathering the world's current difficulties. *\_ML*

# In a nutshell

### EH DACH(\*)

<b>Strengths</b>	<ul style="list-style-type: none"> <li>→ A reputation of quality that favors worldwide exports.</li> <li>→ The <b>premium car industry</b> benefits from its internationalization, in particular in the world's largest markets of China and the United States.</li> <li>→ <b>Very strong German chemicals industry</b>, driven by world leader BASF.</li> <li>→ <b>Some branches of the food sector</b> (including pig farming) are highly competitive in exports.</li> </ul>	<b>Weaknesses</b>
<b>Threats</b>	<ul style="list-style-type: none"> <li>→ <b>Air transport</b>, currently undergoing strategic reconfiguration and restructuring, is still grappling with <b>adverse economic conditions in 2013</b>.</li> <li>→ Tightening of <b>quality controls in the pharmaceuticals industry</b>.</li> <li>→ <b>Slowdown in the electronics sector</b> following a fall in investments in Europe.</li> </ul>	<b>Opportunities</b>

(\*) Germany - Austria - Switzerland

### EH Northern Europe

<b>Strengths</b>	<ul style="list-style-type: none"> <li>→ The United Kingdom's monetary autonomy with respect to the eurozone.</li> <li>→ The financial strength of the City of London.</li> <li>→ One of the few growing automobile markets in Europe.</li> <li>→ Dynamism of food producers on the worldwide export markets.</li> </ul>	<b>Weaknesses</b>
<b>Threats</b>	<ul style="list-style-type: none"> <li>→ Worsening automobile sales in Russia.</li> <li>→ 2013 is a difficult year for some traditional national airlines faced with serious financial difficulties and weakened government shareholders.</li> <li>→ <b>Doubts over loans</b> from the European funds.</li> </ul>	<b>Opportunities</b>

### EH France

<b>Strengths</b>	<ul style="list-style-type: none"> <li>→ A high-performing <b>aeronautics industry</b>.</li> <li>→ <b>Luxury goods sectors</b> that remain buoyant thanks to Asia.</li> <li>→ <b>Export competitiveness of the pharmaceuticals industry</b>.</li> <li>→ <b>Good international positioning of French construction groups</b>.</li> <li>→ Recognition of the expertise of construction companies.</li> </ul>	<b>Weaknesses</b>
<b>Threats</b>	<ul style="list-style-type: none"> <li>→ <b>Air transport</b>, currently undergoing strategic reconfiguration and restructuring, is still grappling with <b>adverse economic conditions in 2013</b>.</li> <li>→ <b>Measures to boost construction ineffective</b> in the face of the deteriorating financial situation of households.</li> <li>→ Mounting deflationary pressures linked to measures to reduce health care deficits.</li> </ul>	<b>Opportunities</b>

### EH Mediterranean

<b>Strengths</b>	<ul style="list-style-type: none"> <li>→ <b>Very low production costs</b> in North African countries for local industry to develop.</li> <li>→ <b>Strong luxury goods industry</b> in Italy for clothing, footwear and cars.</li> <li>→ <b>Structural reforms to improve the competitiveness of Italian industry</b>.</li> <li>→ <b>Growth and wealth in the Gulf countries</b>.</li> </ul>	<b>Weaknesses</b>
<b>Threats</b>	<ul style="list-style-type: none"> <li>→ 2013 is a difficult year for some traditional national airlines faced with serious financial difficulties and weakened government shareholders.</li> <li>→ <b>Ongoing decline in car production in Italy</b> and repercussions for the sector.</li> <li>→ <b>Changing consumption patterns accelerated by economic difficulties</b> (dynamism of supermarket own-brand products at the expense of equivalent branded products, reduced packaging).</li> <li>→ <b>Food retailing highly exposed</b> to struggling households.</li> </ul>	<b>Opportunities</b>
